Ottawa, ON – June 25, 2009 - Menova Energy Inc., a manufacturer of solar concentrators and tracking systems, today announced the opening its Research and Validation facility in Fort Mojave, AZ. Installation of a Power-Spar™ PS-140 Combined Electric/Thermal system and a Rack & Track™ RT-160 azimuth tracker for flat solar panels are nearing completion; the center is expected to be fully on line later this summer.

"The Fort Mojave facility is a very important part of our plans for product validation in high solar intensity markets", said Dave Gerwing, President and Chief Executive Officer of Menova Energy Inc.

"We chose Fort Mojave because of its consistent direct normal solar resource and a strategic relationship with a local power utility. In Canada, where we'll continue to do our initial product development, we've been able to thoroughly test our concentrators and trackers in the extreme cold with maximum snow, wind and ice loads. Fort Mojave receives almost twice the sun hours at much higher intensity levels that what we get here and that will allow us to test and validate our new products faster and more efficiently. The facility, and our partnership with the local power utility, will also serve as a gateway to the renewable energy markets in the US South West".

As an integral part of this 'go fast' initiative, and to more efficiently address the tremendous opportunities in the current renewable energy markets, Menova will be consolidating their Engineering and R&D operations to their production facility in Markham, ON.

About Menova Energy:

Menova Energy Inc. designs, manufactures, and delivers high-performance solar electric & solar thermal systems for building integrated, infrastructure and utility-scale projects. Power-Spar systems deliver significantly more energy density and have a superior return on investment compared to conventional solar electric technologies. Menova Energy has offices and resellers in North America, Europe and the Middle East.
